MAIL DATE

DELIVERY MODE

05/12/2009

PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/023,871	Applicant(s) WAKAI ET AL.	
	Examiner Tan Dean D. Nguyen	Art Unit 3689	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 02 February 2009.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-66 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-66 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Response to Amendment

1. The amendment of 2/2/09 has been entered. Claims 1-66 are pending and rejected as followed. There are 3 groups of claims:

(I) System: 6 sets of claims 1-5, 6-14, 15-16, 17-28, 29 and 30.

(II) Method: 6 sets of claims 31-35, 36-44, 45-46, 47-58, 59, and 60, and

(III) Program product: 6 sets of claims 61, 62, 63, 64, 65 and 66.

Claim Rejections - 35 USC § 112

2. Claims 1-66 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

1) As for independent claims 1, 6, 15, 17, 29, 30, 31, 36, 45, 47, 59, 60, 61, 62, 63, 64, 65, and 66, the phrase "a decision means for deciding" or "a decision performing step of performing", in the information processing apparatus, which is different from the approval service provider", is vague because "means for" or "step for" is an element or step for doing something or carrying out an activity such as "deciding" while "approval service provider" is an entity or company or organization. They are different objects and supposed to be different due to different functions. Therefore, the amended language is vague and indefinite.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Art Unit: 3689

6. Claims 1-5 (system), 31-35 (method), and 61 (respective computer program for the previous method) are rejected under 35 U.S.C. 103 as being obvious over CALVER (US 2001/0 032 092) alone or in view of GADOL (US 5,754,857).

As of 2/2/09, independent system claim 1 is as followed:

1. (Currently Amended) An information processing apparatus, comprising:

(a) receiving means for receiving an approval service object which includes a decision condition set by a user of an approval service provider;

(b) storage means for storing the approval service object received by said receiving means;

(c) approval request preparing means for preparing an approval request based on values entered by a user of the information processing apparatus;

(d) decision means for deciding, in the information processing apparatus, which is different from the approval service provider, whether or not to approve said prepared approval request, based on the decision condition included in said stored approval service object; and

(e) output means for outputting a result of the decision of said decision means.

31. (Currently Amended) An information processing method comprising:

(a) a receiving step for receiving an approval service object which includes a decision condition set by a user of an approval service provider;

(b) a storage step of storing the approval service object received in said receiving step;

c) an approval request preparing step for preparing an approval request based on values entered by a user;

d) a decision step of deciding, in the information processor, which is different from the approval service provider, whether or not to approve said prepared approval request, based on the decision condition included in said stored approval service object; and; and

(e) an output step of outputting a result of the decision of said decision step.

Note: for convenience, letters (a)-(e) are added to the beginning of each step. Also descriptive materials that further limit the data received in step (a) or stored in step (b) are considered as non-functional descriptive material and carry no patentable weight.

Note: independent claim 1 is an apparatus claim. In examination of the apparatus claim, the claims must be structurally distinguishable from the prior art. While features of an apparatus claim may be recited either structurally or functionally, claims directed to an apparatus must be distinguished from the prior art in terms of structure rather than function. See (1) MPEP 2114. (2) *In re Schreiber*, 128 F.3d 1473, 1477-78, 44 USPQ2d 1429, 1431-32 (Fed. Cir. 1997). Apparatus claims cover what a device is, not what a device does, i.e. "device which acts or performs ...". (3) *Hewlett-Packard Co. vs. Bausch & Lomb Inc.* (Fed. Circ. 1990). Manner of operating the device or elements of the device, i.e. recitation with respect to the manner in which a claimed apparatus is intended to be employed/used, does not differentiate apparatus from the prior art apparatus. (4) *Ex parte Masham*, 2 USPQ2d 1647 (BPAI, 1987).

Also, this is an apparatus claim and intended use limitation for the system/device or apparatus, i.e. “for managing plural approval services... service provider” carries no patentable weight.

As for independent claims 1 and 31 and 61, similarly, **CALVER** discloses an information processing apparatus, method and computer program product, comprising:

(a) receiving means for receiving an object (application), which inherently includes a decision condition (business rules and roles for making a consistent and intelligent decision regarding a request) set by a user of a service provider;

{see Figs. 3, 13-14, pars. [0133]-[0134]}

(b) storage means for storing the service object (application) received by said receiving means;

{see Figs. 13, 14, elements 234, 236, 242, “**application**”}

c) a request preparing step for preparing an request based on values (information or data) entered by a user of the information processing apparatus;

{see Fig. 3, 4 “Forms”, }

(d) decision means for deciding, in the information processing apparatus, which is different from the service provider, whether or not to process said prepared request, based on the decision condition included in said stored service object; and

{see Figs. 13, 15, 16, pars. [0054], [0062], [0082-0084], and [0138-0142]}

(e) an output means/step for outputting the result of the decision of said decision step.

{see Fig. 3, 4, 224, pars. [0084]}.

CALVER fairly teaches the claimed invention except for the term “approval” on the service object, service provider and the request by a user. In view of the teachings of providing many business applications to assist small business performances as shown on Figs. 14-15, especially Fig. 16, pars. [0134-0142 “...***Take My Business to the Next Level***”...”...***Manage My Assets Better***...”] and [0143 “..*many modifications and variations are possible in light of the above teaching*...”, it would have been obvious to select other well known business practices such as approval of request as mere applying the same information processing system to other small business application. Furthermore, this feature carries no patentable weight in an apparatus claim because it's not a structure or functional element. Furthermore, this term “approval” or “approval service”, “decision condition”, they are considered as non-functional descriptive material (NFDM) on the data of “...”, thus having no patentable weight. The mere insertion of “approval” or “condition” data over “data” does not “impart functionality when employed as a computer component”, thus having no patentable weight.

See MPEP 2106.01 “Descriptive material can be characterized as either “functional descriptive material” or “nonfunctional descriptive material.” In this context, “functional descriptive material” consists of data structures and computer programs which impart functionality when employed as a computer component. (The definition of “data structure” is “a physical or logical relationship among data elements, designed to support specific data manipulation functions.” The New IEEE Standard Dictionary of Electrical and Electronics Terms 308 (5th ed. 1993).) “Nonfunctional descriptive material” includes but is not limited to music, literary works, and a compilation or mere

Art Unit: 3689

arrangement of data. Note that the claims are merely "information processing" or "data processing" with steps basically call for receiving data/information, storing the data, preparing a processing of input data, determination step on the inputted data, and outputting a result (outputting a information or displaying information/data such as "yes" or "no", etc.) related to the determination step. There are no specific citations of "approving" a request or service and carry out the service.

As for the phrase "set by a user of an approval service provider", this is inherently included in the system of CALVER to make it works effectively as shown on [0133-0134 and 0142]. Alternatively, it would have been obvious to use the user of the approver service to set up the decision conditions since he/she is more familiar with the approval service provider and makes it working efficiently. Moreover, as indicated above, descriptive materials that further limit the data/information received in step (a) or stored in step (b) are considered as non-functional descriptive material and carry no patentable weight. In other word, in a computer-implemented method or data processing method, data is "number, i.e. "100"" or "word, i.e. "John Smith", or "travel"" or "information, i.e. "refund"". How the data is generated, i.e. "set by a user of an approval service provider" carries no patentable weight unless there is a citation of a step or means for "setting up a decision condition in the approval data by a user" prior to step (a).

Alternatively, **GADOL** discloses an automatic approval service system (object or application or workflow) {see col. 1, line 12 to col. 2, line 50}, comprising:

(a) a service server for managing plural approval services; and

{see Fig. 2, element 110-1, col. 4, lines 10-20}

(b) a client terminal having approval request preparing means for preparing an approval request based on values entered by a user of the client terminal, wherein said client terminal further includes:

(ii) decision performing means for performing the approval decision for said approval based on said acquired approval service; and

(iii) output means for outputting the result of the decision of said decision performing means.

{see Fig. 2, element 110-1 and element 110-2, 114-1, 113-1, 112-1}

It would have been obvious to modify the teachings of CALVER by including the business workflow application of approval service system as taught by GADOL for a flexible workflow automation as mere substituting or including other business application to help business managing their asset or resource.

As for dep. claim 2 (part of 1 above), which deals with well known approval processing parameter, an execution means/step for executing a another task/process upon approval, this is taught in CALVER as shown on Figs. 15-16, pars. [0133-0138] or GADOL col. 2, lines 1-5, 45-65.

As for dep. claims 3-4 (part of 1 above), which deals with well known approval processing parameters, decision condition parameters (or business rules parameters, or types of rules), these are taught in CALVER [0130-0131] or GADOL col. 1, lines 25-45, col. 2, lines 1-50, or col. 10, lines 1-50. Alternatively, the types of decision conditions or

Art Unit: 3689

rules depending on its type, rigid or dynamic, varying with the types of service requested, etc. and would have been obvious to a skilled artisan to select the condition corresponds to the information to make the system works properly. Moreover, the descriptive materials that further limit the data/information received in (a) or stored in (b) are considered as non-functional descriptive material and carry no patentable weight, for the same reasons set forth above.

As for dep. claim 5 (part of 1 above), which deals with well known approval processing parameters, i.e. decision condition (rules) timing parameters such as no approval during prohibition period or company inactive/unavailable period, etc., this is taught on GADOL col. 10, lines 40-45 wherein the request made to an office after its closing time (prohibition period) has to be routed to a qualified individual at another office with later hours or in a different time zone. Moreover, this is non-essential to the scope of the claimed invention with deals with automation and would have been obvious to a skilled artisan to carry out this limitation since there are well known company prohibition periods when no activities are desired, such as after closing time or Sunday or holidays such as July 4 or Dec. 25, since the company are inactive or off on those time.

As for method claims 32-35, they are basically the respective method to carry out the system claims 2-5 above, they are rejected for the same rejections as cited in the rejections of claims 1-5 above. Moreover, it would have been obvious to a skilled artisan to set up the same respective steps to achieve the same respective function of the system claim.

7. Claims 6-14, 15-16, 17-28, 29, and 30 (systems), 36-44, 45-46, 47-58, 59, and 60 (methods), 62, 63, 64, 65 and 66 (computer program products) are rejected under 35 U.S.C. 103(a) as being unpatentable over CALVER in view of GADOL in view of eFlow article (March 2000).

Note that it appears that claim 6 is an apparatus claim. In examination of the apparatus claim, the claims must be structurally distinguishable from the prior art. While features of an apparatus claim may be recited either structurally or functionally, claims directed to an apparatus must be distinguished from the prior art in terms of structure rather than function. *In re Schreiber*, 128 F.3d 1473, 1477-78, 44 USPQ2d 1429, 1431-32 (Fed. Cir. 1997). Apparatus claims cover what a device is, not what a device does. *Hewlett-Packard Co. vs. Bausch & Lomb Inc.* (Fed. Cir. 1990). Manner of operating the device or elements of the device, i.e. recitation with respect to the manner in which a claimed apparatus is intended to be employed/used, does not differentiate apparatus from the prior art apparatus. *Ex parte Masham*, 2 USPQ2d 1647 (BPAI, 1987).

Also, this is an apparatus claim and intended use limitation carries no patentable weight. Therefore, the following limitations have no patentable weight:

- (1) "for managing plural approval services... service provider" ,
- (2) "...based on values entered by a user of the client terminal",

Similarly, as teaches above, CALVER / GADOL discloses an approval system, comprising:

- (a) a service server for managing plural approval services; and

{see CALVER Figs. 2-5, 15-16, GADOL Fig. 2, element 110-1, col. 4, lines 10-20}

(b) a client terminal having approval request preparing means for preparing an approval request based on values entered by a user of the client terminal, wherein said client terminal further includes:

(i) acquisition means for searching for and acquiring a service object,

(ii) decision performing means for performing the approval decision for said approval based on said acquired approval service; and

(iii) output means for outputting the result of the decision of said decision performing means.

{see CALVER Figs. 2-5, 16 “**acquisition** sourcing and financing”, pars. [0138], GADOL Fig. 2, element 110-1 and element 110-2, 114-1, 113-1, 112-1}

CALVER /GADOL fairly teaches the claimed invention except for (i) of acquisition means for searching and acquiring a service matching the request, among the plural approval services registered in said service server, wherein the approval service includes a decision condition set by a user of the approval service provider. Note that the selection of the boundary of the service server and client terminal is relative

eFlow Article is cited to teach a platform for developing and managing composite e-Services by a service provider D wherein the service provider offers a new service category, i.e. eMove, that provides complete relocation services that are operated by invoking other services, possibly offered by service providers A, B, C, or by

Art Unit: 3689

service provider D itself. The service provider D will take care of selecting and invoking the proper composite eMove Service by matching the user's request information with the acquired service provided by service providers A, B, or C {see cols 2-3, 7-8, 10, and especially cols. 10-11, Fig. 1, 3, 7-8}. This allows the company to offer higher value, end-to-end services to meet the customer's various needs or requests or requirements. The eFlow platform supports the specification, deployment, and management of composite e-services, i.e., of e-services that are carried out by invoking several other basic or composite services {see cols 1-2}. Clearly, service provider D has to register the services of service providers A, B, or C on its server prior to using their services or the registration of other services on service server of A is inherently included prior to activating the services provided by providers A, B or C. As for the difference in the service provided (type of service), approval vs. moving, this is non-essential since this is merely intended use of the service and this is within the skill of the artisan, moreover, the critical feature here is the managing of composite services or e-services by one entity and the providing of multiple services to a customer to meet all of the customer's needs. It would have been obvious to modify the teaching of CALVER / GADOL by including in element (i) means for acquiring other services (or composite services) that registered in the server (Fig. 2, element 110-1, 114-1) for providing other services requested by the user based on the data/values entered by a user of the client terminal as taught by eFlow Article for the benefit cited above which is providing higher value, end-to-end services to meet the customer's various needs or requests or requirements. Also, the selection of the service server or client terminal for storing the

Art Unit: 3689

searching/acquisition of the approval services depends on the ability of the client or provider to handle the cost, operation, flexibility, of the computer network as shown in Fig. 2 and would have been obvious to a skilled artisan to elect either the client or the service provider to perform the previous functions as desired or suitable.

As for dep. claim 7 (part of 6 above), which deals with a method step/manner of operation "... provider registers" of a non-patentable weight element in an apparatus claim as indicated above, this feature has no patentable weight in an apparatus claim.

As for dep. claim 8 (part of 6 above), which deal with the features of the request storage means and acquiring means, these are taught in CALVER Figs. 2-4 or GADOL Fig. 2, 6 and 7 of GADOL and cols. 3 and 10 of eFlow Article.

As for dep. claim 9 (part of 6 above), which deal with the capability ("...is constructed to search and acquire...") of the acquisition means based on a method step or manner of operation ("upon detecting" and "is connected") as shown in the claim "is constructed to ...upon detecting that said client terminal is connected..." which has no patentable weight in an apparatus claim. Furthermore, GADOL/eFlow Article has this capability.

As for dep. claim 10 (part of 6 above), which deals with well known terminal parameter, i.e. a portable terminal, this is taught in CALVER Figs. 2-4, 16, GADOL Fig. 2, 113-1, laptop computer, of GADOL.

As for dep. claim 11 (part of 6 above), which deals with the capability ("is constructed to search for and acquire...") of the acquisition means in response to a manner of operating of an element of the device or a method step, i.e. "*in response to*

the insertion of a card", this has no patentable weight in an apparatus claim as noted above. Furthermore, CALVER/GADOL/eFlow Article has this capability.

As for dep. claim 12 (part of 6 above), which appears to deal with a method step/manner of operation "... in the case that the ...approval" in an apparatus claim, this feature has no patentable weight in an apparatus claim. Furthermore, it's an optional feature, thus having no patentable weight. Furthermore, this is inherently included in the teachings of CALVER/GADOL /eFlow Article as shown in GADOL col. 3.

As for dep. claim 13 (part of 6 above), which appears to further limit a data or information (decision condition) in an apparatus claim, this is considered as non-functional descriptive material (NFDM) and thus having no patentable weight. Furthermore, this is inherently included in the teachings of CALVER/GADOL /eFlow Article as shown in eFlow Article cols. 10-11.

As for dep. claim 14 (part of 6 above), which appears to deal with a method step/manner of operation "...further searches..." in an apparatus claim, this feature has no patentable weight in an apparatus claim. Furthermore, this is inherently included in the teachings of CALVER /GADOL /eFlow Article as shown in GADOL Fig. 2, eFlow Article cols. 10-11.

As for independent system claim 15, CALVER discloses Figs. 2-4, 13, [0118, 0133, 0134] and GADOL discloses storage means (database) for storing data/services about an approval request by a user, and wherein the approval data includes a decision condition (rules) inherently set by a user of the provider {see Fig. 2, 114-2, 110-2, } and

Art Unit: 3689

transmission means for searching for approval service matching the request based on data (search instruction) received from an external apparatus {see Fig. 2, 113-1, 112-2, Fig. 3, 222 and 224} and transmitting the data/service to the external apparatus {see Fig. 3, 222, 224}. As for the limitation of “wherein the external apparatus decides whether or not to approve...a user”, this appears to be a function or step and not a elemental structure, thus having no patentable weight in an apparatus claim. Moreover, this limitation is inherently included in the teachings of CALVER/GADOL or eFlow Article. GADOL fairly teaches the claimed invention except for the limitation of “storing plural services instructed for registration by another service provider” which is taught by eFlow Article above when service provider D instructs the registration of services by service provider A, B, or C for use along with the service from provider D. Also, the selection of the service server or client terminal for storing the searching/acquisition of the approval services depends on the ability of the client or provider to handle the cost, operation, flexibility, of the computer network as shown in Fig. 2 and would have been obvious to a skilled artisan to elect either the client or the service provider to perform the previous functions as desired or suitable.

As for dep. claim 16 (part of 15 above), which deals with information means for informing (notifying) information/data, this notifying limitation is taught on CALVER Figs. 3-4, 16 and GADOL Fig. 3, 222 and 224. Note that the last line of “registration ...service provider” is non-functional descriptive material and/or does not have a structural elements, thus have no patentable weight. Furthermore, the last line “...when

Art Unit: 3689

a new approval service is registered ...” appears to deal with a method step/manner of operation, this feature has no patentable weight in an apparatus claim.

As for independent system claim 17, which has similar limitations as in independent system claim 6 except for another server is added, a request server, to carry out the functions of the client terminal which are means for storing the request, means for searching and acquiring the service, means for performing the approval decision, and means for outputting the result of the decision, they are rejected for the same reasons set forth in the rejections of claim 6 above. However, CALVER discloses Figs. 3-4, 5-16, [0046-0053], and GADOL teachings the use of two servers, 110-1 and 110-2, for service and request server. Therefore, in view of the teachings of eFlow Article, it would have been obvious to elect one of the two servers in CALVER or GADOL for carrying out the functions cited above as mere selection of suitable server to carry out the same teachings as in claim 6 above. Also, the selection of the service server or client terminal for storing the searching/acquisition of the approval services depends on the ability of the client or provider to handle the cost, operation, flexibility, of the computer network as shown in CALVER Figs. 3-5 or GADOL Fig. 2 and would have been obvious to a skilled artisan to elect either the client or the service provider to perform the previous functions as desired or suitable.

As for dep. claims 18-28 (part of 6 above), which appear to deal with method steps or manners of operation of the acquisition means, service server, service provider, approval service, client terminal, etc. similar to those of dep. claims 7-14 above, they are rejected for the same reasons set forth in the rejections of dep. claims

Art Unit: 3689

7-14 above, or in other word, these features have no patentable weight in an apparatus claim.

As for independent system claim 29, which has similar limitations as in independent system claim 6 except for the service server has the means for performing the approval decision instead of the client terminal, this is taught in CALVER /GADOL as shown in CALVER Figs. 3-5 or GADOL Fig. 2, element 110-1 or 110-2. The means for transmitting the result of the approval decision is taught in CALVER Figs. 3-5 and GADOL Fig. 2, 112-1 or 113-1. Also, the selection of the service server or client terminal for storing the searching/acquisition of the approval services depends on the ability of the client or provider to handle the cost, operation, flexibility, of the computer network as shown in Fig. 2 and would have been obvious to a skilled artisan to elect either the client or the service provider to perform the previous functions as desired or suitable.

As for independent system claim 30, which has similar limitations as in independent system claim 17 except for the service server has the means for performing the approval decision instead of the client terminal, this is taught in CALVER Figs. 3-5, 16 or GADOL as shown in Fig. 2, element 110-1 or 110-2. The means for transmitting the result of the approval decision is taught in Fig. 2, 112-1 or 113-1. Also, the selection of the service server or client terminal for storing the searching/acquisition of the approval services depends on the ability of the client or provider to handle the cost, operation, flexibility, of the computer network as shown in Fig. 2 and would have

Art Unit: 3689

been obvious to a skilled artisan to elect either the client or the service provider to perform the previous functions as desired or suitable.

As for method claims 36-44, they are basically the respective method to carry out the system claims 6-14 above, they are rejected for the same rejections as cited in the rejections of claims 6-14 above. Moreover, it would have been obvious to a skilled artisan to set up the same respective steps to achieve the same respective function of the system claim.

As for method claims 45-46, they are basically the respective method to carry out the system claims 15-16 above, they are rejected for the same rejections as cited in the rejections of claims 15-16 above. Moreover, it would have been obvious to a skilled artisan to set up the same respective steps to achieve the same respective function of the system claim.

As for method claims 47-58, they are basically the respective method to carry out the system claims 17-28 above, they are rejected for the same rejections as cited in the rejections of claims 17-28 above. Moreover, it would have been obvious to a skilled artisan to set up the same respective steps to achieve the same respective function of the system claim.

As for method claim 59, it's basically the respective method to carry out the system claim 29 above, it's rejected for the same rejections as cited in the rejections of claim 29 above. Moreover, it would have been obvious to a skilled artisan to set up the same respective steps to achieve the same respective function of the system claim.

Art Unit: 3689

As for method claim 60, it's basically the respective method to carry out the system claim 30 above, it's rejected for the same rejections as cited in the rejections of claim 30 above. Moreover, it would have been obvious to a skilled artisan to set up the same respective steps to achieve the same respective function of the system claim.

As for computer program products claims 62, 63, 64, 65 and 66, they are basically the respective computer program products to carry out the independent system claims 6, 15, 17, 29 and 30 above, they are rejected over the computer program products required to carry out the rejections of claims 6, 15, 17, 29 and 30 by the computer-implemented system of CALVER /GADOL indicated in Figs. 2, and 1. Moreover, it would have been obvious to a skilled artisan to set up the same respective computer program product to achieve the same respective function of the computer-implemented system claim.

Response to Arguments

8. Applicant's arguments with respect to claims 1-66 on Remarks of 2/2/09 have been considered but are moot in view of the new ground(s) of rejection which are caused by applicant's amendment of the claims.

Art Unit: 3689

Conclusion

9. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

No claims are allowed.

10. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through private PAIR only. For more information about the PAIR system, see <http://pair-direct@uspto.gov>. Should you have any questions on access to the private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll free).

In receiving an Office Action, it becomes apparent that certain documents are missing, e. g. copies of references, Forms PTO 1449, PTO-892, etc., requests for copies should be directed to Tech Center 3600 Customer Service at (571) 272-3600, or e-mail CustomerService3600@uspto.gov.

Any inquiry concerning the merits of the examination of the application should be directed to Dean Tan Nguyen at telephone number (571) 272-6806. My work schedule is normally Monday through Friday from 6:30 am - 4:00 pm. I am scheduled to be off every other Friday.

Should I be unavailable during my normal working hours, my supervisor Janice Mooneyham can be reached at (571) 272-6805.

The main FAX phone numbers for formal communications concerning this application are (571) 273-8300. My personal Fax is (571) 273-6806. Informal communications may be made, following a telephone call to the examiner, by an informal FAX number to be given.

/Tan Dean D. Nguyen/
Primary Examiner, Art Unit 3689
